

## PROFESSIONAL SUMMARY

Associate with 2+ years of professional experience in operations, process management, and technology-driven automation. Skilled in AWS, Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, Python, and CI/CD practices. Hands-on experience building AI-powered applications using RAG, LangChain, Pinecone, AWS, and Kubernetes. Passionate about DevOps, MLOps, LLMOps, AI Infrastructure, and Cloud Engineering with strong analytical, problem-solving, and stakeholder management skills.

---

## TECHNICAL SKILLS

Cloud: AWS (EC2, EKS, ECR, IAM, VPC)

Machine Learning & NLP: Supervised Learning, Unsupervised Learning, TensorFlow API

Development: REST API, FastAPI, JSON

DevOps: Docker, Kubernetes, GitHub Actions

Monitoring: Prometheus, Grafana, CloudWatch

Programming: Python, Bash, Linux

AI/LLMOps: LangChain, OpenAI, Pinecone, RAG, LangSmith

Version Control: Git, GitHub

---

## PROFESSIONAL EXPERIENCE

Associate | EXL Service India Pvt. Ltd. Apr

2024 – Present | Noida, India

- Process and validate customer, policy, claims, and operational data while ensuring compliance with client-specific guidelines and SLAs.
- Perform data analysis, verification, and quality checks to maintain high levels of accuracy and operational efficiency.
- Handle back-office operations, transaction processing, and document management activities for global clients.
- Investigate discrepancies, identify root causes, and coordinate with cross-functional teams to resolve operational issues.
- Prepare daily, weekly, and monthly MIS reports, productivity dashboards, and performance metrics.
- Support process improvement initiatives by identifying automation opportunities and optimizing workflows.
- Ensure adherence to regulatory requirements, company policies, and quality standards.

- Collaborate with team members and stakeholders to achieve operational targets and improve customer satisfaction.
  - Maintain process documentation, SOPs, and knowledge repositories for business continuity.
  - Consistently achieve productivity, quality, and turnaround-time targets in a fast-paced environment.
- 

## PROJECTS

Medical AI Assistant Platform (RAG + LLMOps) :- [GitHub](#)

Tech Stack: Python, Flask, OpenAI, LangChain, Pinecone, Docker, Kubernetes, AWS EKS, AWS ECR, GitHub Actions, Prometheus, Grafana, LangSmith

- Designed and developed an AI-powered Medical Assistant using Retrieval-Augmented Generation (RAG) architecture.
  - Implemented document ingestion, text chunking, embedding generation, vector indexing, and semantic retrieval pipelines.
  - Integrated OpenAI, LangChain, and Pinecone for context-aware question-answering workflows.
  - Developed REST APIs using Flask for user interaction and LLM inference requests.
  - Applied prompt engineering techniques to improve retrieval quality and contextual relevance.
  - Integrated LangSmith for prompt tracing, evaluation, workflow debugging, and observability.
  - Containerized the application using Docker and managed images through AWS ECR.
  - Deployed workloads on Amazon EKS using Kubernetes Deployments, Services, ConfigMaps, and Secrets.
  - Built CI/CD pipelines using GitHub Actions for automated build, testing, image publishing, and Kubernetes deployments.
  - Implemented monitoring using Prometheus and Grafana for application, infrastructure, and Kubernetes metrics.
  - Leveraged AWS EC2, ECR, and EKS services to build a scalable cloud-native deployment architecture.
  - Followed DevOps, MLOps, and LLMOps best practices for deployment automation, monitoring, and AI application observability.
- 

## EDUCATION

Bachelor of Computer Applications (BCA)

Arcade Business College, Patna
